

# MODEL 9 series

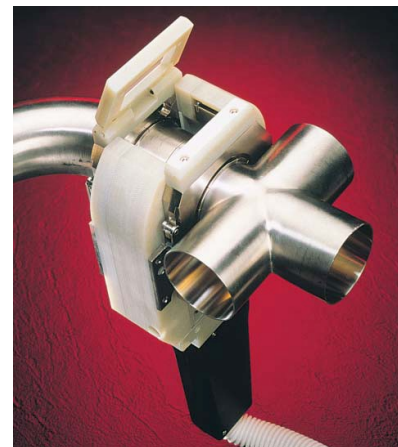

## FUSION (GTAW) WELD HEADS

*The widest range of orbital welding equipment in the world*

The Model 9 series of orbital weld heads are designed for fusion (TIG) welding of tube, pipe, fittings or other cylindrical components. Available in eight sizes and three versions, they accommodate diameters from 3/32" (2,3 mm) to 7.5" (190,5 mm) OD, and wall thicknesses from 0.01" (0,25 mm) to 0.16" (4 mm). Each weld head fits a wide range of tube sizes via easily replaced, size-specific clamps. These weld heads are compatible with all AMI Power Supplies.

The standard Model 9 incorporates a two-sided clamping mechanism to hold components being welded in line and concentric - eliminating the need for tack welding. Several of these heads incorporate a flip-up viewing window, for easy verification of fit-up. Most Model 9 weld heads are plumbed for water cooling of both the cables and internal weld head components - allowing increased duty-cycles.

### Conversion Kits

To enhance versatility, many Model 9 series weld heads may be converted to an alternate configuration by installing a conversion kit. The conversion takes 5 to 10 minutes, using only a screwdriver and a hex wrench.

## MODEL 9-250, MINI WELD HEAD

The Model 9-250 is a precision, orbital GTAW (TIG) weld head designed for fusion butt welding up to 1/4" (6,35 mm) OD tubing, mini-fittings, and valve bodies with extremely tight radial clearance limitations.

The tooling for the 9-250 is provided with a visual sight window to verify fit-up and it incorporates two sets of hardened clamp plates. The unique latch design provides a firm grip while maintaining concentric alignment of the parts to be welded.

## MODEL 9-500 & 9-500C MINI WELD HEADS

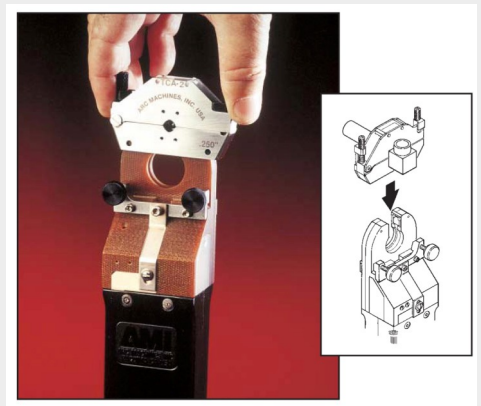

The Model 9-500 & Model 9-500C weld heads are designed mainly for welding of components with stick-out as short as 0.25" (6,35 mm) in diameters from 3/32" (2,3 mm) through 1/2" (12,2 mm). The Model 9-500C is water-cooled so it is capable of higher duty cycle applications. It is provided with a Quick Release Kit, which allows for remote loading of the clamp assemblies. The Quick Release Kit (optional for the Model 9-500) provides a 360° view of the weld joint, and facilitates the use of multiple clamp assemblies to further increase the duty-cycle. A wide variety of tooling is available for both models, such as clamp assemblies, tube clamp and fitting clamp inserts, and adjustable mini cubes.

## MODEL 9E SERIES

The Model 9E series weld heads are designed for fusion (TIG) welding of tube or thin-wall pipe through the range of 0.25" (6,3 mm) to 6.625" (168,3 mm) OD. It's available in five sizes to weld components that do not provide enough stick-out for a double-clamp set up. An off-set electrode, single-sided clamp and gas seal make the Model 9E series weld heads adaptable to a wide variety of applications, e.g. pipe fitting and short sanitary ferrules. Clamp inserts and gas seals are available for all standard sizes as well as for custom applications.

## MODEL 9CT SERIES

Available in three sizes, the Model 9CT (Cassette Type) series weld heads are designed for fusion (TIG) welding of tube or thin-wall pipe through the range of 0.093" (2,3 mm) to 1.50" (38,1 mm) OD. The clamps on this type of head are mounted into a removable cassette module which acts as a fixturing device to align and hold the tubing or fittings prior to welding. It also allows 360° visibility of the weld joint. The use of multiple cassettes facilitates significantly higher production rates. All Model 9CT weld heads have built-in water cooling capability for high-duty cycle applications.

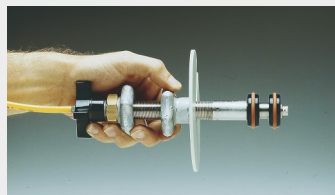

## ACCESSORIES

### Fitting Support Mandrel

Designed to facilitate the orbital welding of fitting-to-fitting assemblies which do not have sufficient straight length to be held in an orbital weld head. It also serves as an ID purge device. The tool is adaptable to a wide range of fitting sizes and assembly configurations.

### Purge Mandrel Tool

Provides a quick and easy method of aligning sanitary ferrules and other similar types of fitting without pre-tacking. It includes provisions for ID purging, and is adaptable for a wide range of ferrules and fitting types and sizes.

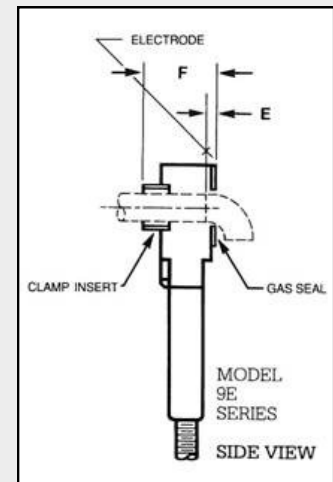

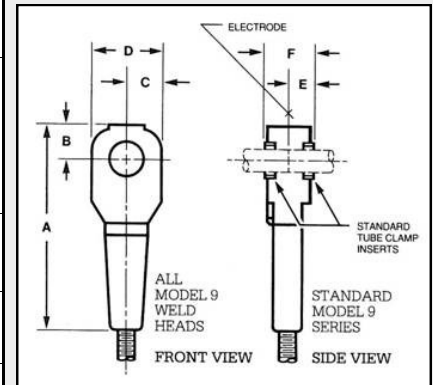

### Additional Accessories

- Tungsten electrodes
- Off-set electrode holders
- Bench mount bracket
- Tube alignment gauge
- Conversion kits
- Extension cables
- Reusable, heavy-duty shipping/storage case
